Paccar Mx Engine Coolant System

Put a coolant system pressure bleed-down tester on it when it's cold. Start the truck and let it run until the thermostat opens and watch what the pressure builds to as it continues to idle. If it runs high, you either have a blown head gasket or (more likely with the "wet-stacking") a cracked head.

PACCAR recommends the following for best operational performance for the MX-13 EPA2010 en-gine: • Prolonged periods of low idle RPMs and high idle times at low ambient temperatures, along with low coolant temperature levels, can cause damage to the engine and the aftertreatment system (See the PACCAR MX-13 Engine Operator's Manual).

PACCAR MX-13 EPA2010 Maintenance Recommendations

Through continuous field testing in PACCAR's MX engine and other major engine platforms, engineers determined TRP® Extended Life Coolant (ELC) performance can be increased by 33 percent. This top-tier coolant now provides 1,000,000 miles/8 years of service life without coolant extender or supplemental coolant additive required.
