Optics, science concerned with the genesis and propagation of light and with the changes that it undergoes and produces. Physical optics deals with the nature of light itself. Geometrical optics has to do with the principles that govern the image-forming properties of devices that make use of light.

Optical instruments are the devices which process light wave to enhance an image for a more clear view. The use of optical instruments, such as a magnifying lens or any complicated device like a microscope or telescope, usually makes things bigger and helps us to see in a more detailed manner.

ray is incident at an angle of  $\beta$  with the mirror. Given that the interior angles of a triangle sum to  $180^\circ$ , we know that  $\beta = 180^\circ - 90^\circ - \alpha$ . Therefore the incident and reflected rays are parallel, and the angle of reflection at the second mirror is  $\alpha$ .
