Evolution, theory in biology postulating that the various types of plants, animals, and other living things on Earth have their origin in other preexisting types and that the distinguishable differences are due to modifications in successive generations. The theory of evolution is one of the fundamental keystones of modern biological theory.

evolution | Theory, Examples, & Facts | Britannica

Evidence of Evolution-Answers in gray Background. When Charles Darwin first proposed the idea that all new species descend from an ancestor, he performed an exhaustive amount of research to provide as much evidence as possible. Today, the major pieces of evidence for this theory can be broken down into the fossil record, embryology, comparative anatomy, and molecular biology.

Fossils

Darwin's Theory of Evolution is the widely held notion that all life is related and has descended from a common ancestor: the birds and the bananas, the fishes and the flowers -- all related.

Darwin's general theory presumes the development of life from non-life and stresses a purely naturalistic (undirected) "descent with modification".

Darwin's Theory Of Evolution

Darwin's theory became the basis for a belief system - a new worldview basis called evolution - allowing for an explanation for our existence independent from God. It has been said that Darwin has done more harm to the Christian faith than any persecution in history.
